

About Me

My journey to becoming a software engineer began long before I knew. I'm always looking for an opportunity to do something creative or advancing my skills in the unknown. With that attitude, I started my own business through Shopify. I learned how to run my own sites whenever I needed to. I saw a great opportunity to start a productive business and reach numerous amounts of people, promoting my business online. I was a builder, but never knew anything about HTML and CSS. I was curious about it knowing that the sites that I build were created using these languages. Eventually, things didn't work out with my businesses... and I saw an opportunity to pursue another love of mine: joining the travel industry.

After a few years of working in the travel industry, I began to think I wasn't working a job that I love, but a job that I like. It's always been a good job, but I wanted to see if there was something different for me. I thought about coding, and knew a little about it but not much. I would hear about it from time to time. I thought I'd look into it. After looking around, I came across FreeCodeCamp and saw that I can start learning for free. I wasn't serious about it, I thought I'd try it. It wouldn't hurt, right?! While learning how to code using the language I was always curious about, I was learning something that I enjoyed doing. Learning HTML and CSS was great. I was creating projects with the language I wanted to know more about. I wanted to learn more about coding, but I didn't know where to start, how to go about it.

I began looking into coding boot camps and came across TrueCoders. This was an opportunity to receive guidance in the languages I should learn, the path I should go down... and so on and so forth. After different projects, new connections and guidance by the staff, I was ready to pursue my career in software engineering. I've enjoyed my journey; I look forward to joining a team that shares the excitement that I have for this industry. My goal is to create some creative apps and continue to learn more. It's been great so far and I can see myself in a prominent position being productive for a long time.
